Additional requirements	<ul style="list-style-type: none">Option must be pre-set at the factoryBerghof System Library MX6 1.23.0 or higher
Restrictions	No subsequent licensing in the field possible.

3 Product description

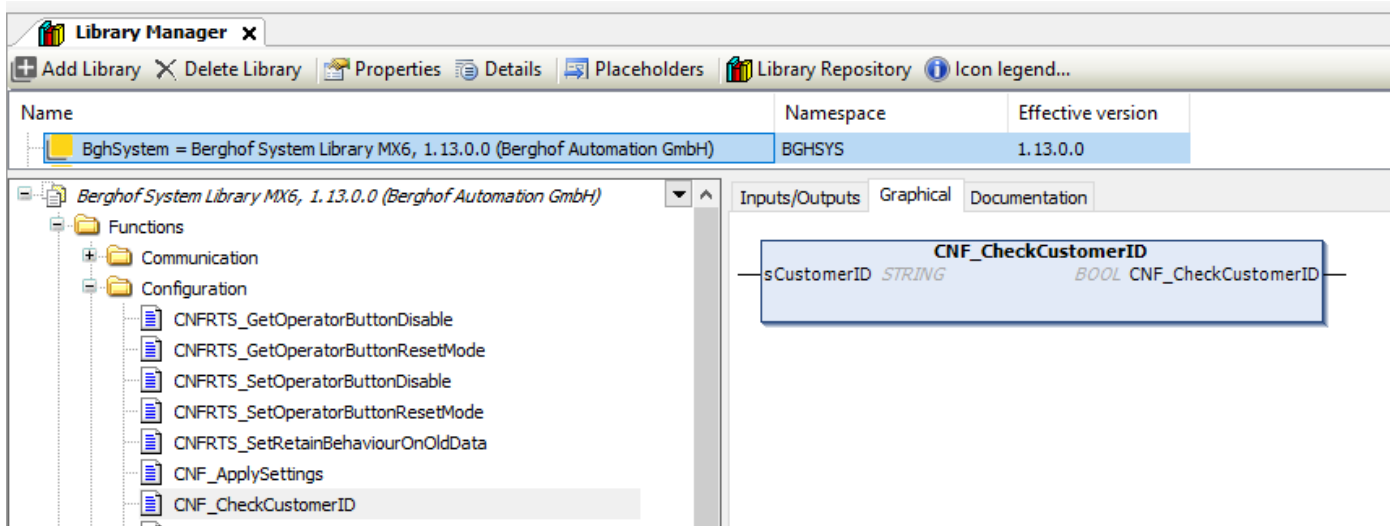

With this extension it is possible to protect CODESYS application or libraries against duplication. For this purpose, a unique customer identification is permanently programmed into the device before delivery. This identifier can be queried and checked with the help of our system library within CODESYS.

4 Quick Start Guide

4.1 Integrating application protection into the application

To use application protection, the CNF_CheckCustomerID function must be called from the Berghof System Library. This function checks if the passed customer number matches the one of the device.

It should be encapsulated within a library function for projects with open sources to prevent manipulation.
