12.1. Customer services ............................................................................................................. 75
12.2. Addresses .......................................................................................................................... 75
13. APPENDIX ............................................................................................................................. 76
13.1. List of figures ..................................................................................................................... 76
1. General information

This user handbook is intended for use by qualified professionals and contains information on the assembly, installation, start-up and maintenance of the device.

1.1. Notes on the handbook

This user handbook is a component of the product and applies to the following devices:

- DC2115 Dialog Controller
- ET2115 Ethernet Terminal

It contains information on the following topics:

- Applications
- Safety
- Mechanical design
- Electrical design
- Connections
- Start-up
- Upkeep and maintenance
- Decommissioning
- Disposal

Always keep this user handbook available alongside the product.

1.2. Symbols and visual depictions

The following symbols and visual depictions will be used in this handbook:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>➔ ...</td>
<td>List entry</td>
</tr>
<tr>
<td>➔ ...</td>
<td>Individual instruction or list of instructions which can be carried out in any order.</td>
</tr>
<tr>
<td>1. ...</td>
<td>List of instructions which must be carried out in the order given.</td>
</tr>
<tr>
<td>2. ...</td>
<td></td>
</tr>
<tr>
<td>📝</td>
<td>Additional product information</td>
</tr>
</tbody>
</table>
Design of warnings:

<table>
<thead>
<tr>
<th>WARNING</th>
<th>Danger type and source</th>
<th>Short description and possible consequences</th>
<th>Preventive measures</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>Optional: additional symbols</td>
<td></td>
</tr>
</tbody>
</table>

1.3. Hazard categories and indications

The following indications are used in the case of warning messages so as to ensure your personal safety and avoid any damage to property.

The indications have the following meanings:

<table>
<thead>
<tr>
<th>DANGER</th>
<th>Serious injury or death</th>
<th>Non-compliance with the safety features will result in death or serious injury.</th>
<th>Take preventive measures.</th>
</tr>
</thead>
<tbody>
<tr>
<td>WARNING</td>
<td>Possible serious injury or death</td>
<td>Non-compliance with the safety features may result in death or serious injury.</td>
<td>Take preventive measures.</td>
</tr>
<tr>
<td>CAUTION</td>
<td>Possible minor injuries</td>
<td>Non-compliance with the safety features may result in minor injuries.</td>
<td>Take preventive measures.</td>
</tr>
<tr>
<td>NOTE</td>
<td>Possible damage to property</td>
<td>Non-compliance with the safety features may result in damage to property.</td>
<td>Take preventive measures.</td>
</tr>
</tbody>
</table>

1.4. Qualified personnel

The installation, start-up and maintenance of the device must be carried out by qualified personnel. For the purposes of this documentation and the safety instructions contained therein, “qualified personnel” means trained staff with the authorisation to assemble, install, start up, earth and identify devices, systems and electrical circuits in accordance with standards set in safety engineering and who are familiar with safety concepts in automation engineering.
1.5. Duty of care

The user or processor (OEM) must ensure the following:

- The device must only be used according to regulations.
- The device must only be used in good working order.
- The user handbook must always be kept legible and fully available.
- Only sufficiently qualified and authorised personnel may carry out the assembly, installation, start-up and maintenance of the device.
- This authorised personnel must receive regular training on all relevant occupational health and safety and environmental protection issues and must be fully familiar with the content of this user handbook, particularly the sections regarding safety features.
- Any markings or identification labels and safety and warning signs on the device must not be removed and must be kept legible at all times.
- The national and international regulations regarding the operating of machinery and facilities where the device is being used must be observed at all times.
- The user must always be kept abreast of any current relevant information regarding the device and its use or operation.

1.6. Intended use

The device is part of a modular automation system for industrial control applications within the medium to high performance range. It extends the communications capabilities to include EtherCAT, Profinet, Modbus and others.

The automation system is designed for use within overvoltage category I (IEC 364-4-443) systems for controlling and regulating machinery and industrial processes in low-voltage installations in accordance with the following general parameters:

- maximum rated supply voltage of 1,000 V AC (50/60 Hz) or 1,500 V DC
- for use in maximum category 2 pollution environment (EN 60950)
- for use up to a maximum altitude of 2,000 m above msn.
- for indoor use only in areas not exposed to direct UV radiation
- Max. Ambient temperature inside and outside the control cabinet in accordance with the technical data (see “Technical Data”)

Qualified project planning and design, proper transport, storage, installation, use and careful maintenance are essential to the flawless and safe operation of the automation system.

The automation system may only be used within the scope of the data and applications specified in this documentation and associated user manuals.

The automation system must only be used:

- as intended
- in a technically perfect condition
- without any unauthorised modifications
- by qualified users

- Observe the rules of the employer’s liability insurance association, the technical inspectorate, and the VDE (Association of German Electrical Engineers) or corresponding country regulations.
The device is intended for installation into a suitable cut-out on industrial machines and systems in indoor areas.

- When installing the device, check that the seal profiles are undamaged.
- For operation, refer to the applicable statement of ambient conditions (see "Technical Data").

1.7. Transport and storage

The device is susceptible to impacts, heavy vibration, humidity and extreme temperatures.

**Transport and storage**

- Protect the device against major mechanical stresses during transport.
- Always pack the device in its original packaging for transport.
- For storage, refer to the applicable statement of ambient conditions (see "Technical Data").
- Protect the device against condensation and damp.

**Operation**

- If the device has been stored or transported in cold weather or under conditions or large fluctuations in temperature, do not start to operate it until it has acclimatised to room temperature for the place it is used.
- If condensation is present, wait at least 12 hours before starting to operate the device.

1.8. Unpacking

Upon receipt of the device, a check must be made that it is complete and undamaged.

1. Check the packaging for external damage.
2. If the packaging is seriously damaged or if damage to the contents is evident: Do not proceed further with opening the packaging, instead immediately inform the transport company and your supplier.
3. Remove the packaging and keep it safe for subsequent transport.
4. Check the contents for evidence of damage in transport.
5. Check the contents for completeness against the order documentation and keep all the delivery documentation for future reference. The delivery documentation contains important information about the device and is part of the product.
6. If you discover damage in transport or the contents do not match the order: Inform the supplier immediately.
2. **Safety**

**Safety-related systems**
The use of PLC in safety-related systems requires specific measures. Wherever a PLC is to be used in a safety-related system, the user must be given comprehensive advice by the PLC manufacturer in addition to information on any available standards or regulations regarding safety installations.

- Before starting any work on devices, switch off all power feeds, including to peripherals.
- Keep all ventilation holes unobstructed.

Failure in certain components in an electronic control system may result in uncontrolled and/or unpredictable operational behaviour.

- All types of failure must be considered at the system level and the associated preventative measures identified.
- If necessary, request information from your automation system provider.

**2.1. Safety instructions**

The device may be operated only when it is in good working order. Exposed sharp edges pose an injury risk.

- If you discover damage to the front glass of the device, do not continue to operate the device. Immediately disconnect it from the power supply.

**Working on the device**

Do not start work on the device until all necessary safety precautions have been taken. Take precautions to avoid unforeseeable functional events and movements of the system.

1. Bring the system into a safe condition.
2. Switch the system and the device off.
3. Secure the system against being switched on again.
4. Disconnect the device from the system.

The housing of the device must not be opened.

- If work on the internal parts of the device is necessary, contact the manufacturer (see "Addresses").
3. **Product description**

The DC2115 Dialog Controller is a control module with a display for the control and regulation of automation and industrial processes in low-voltage installations in real time.

The CODESYS 3.5 (IEC 61131-3) development environment from 3S-Smart Software Solutions is used for programming the device.

The Ethernet Terminal ET2115 is an input device with a display for connection to a control system for machines or systems. The terminal shows the CODESYS Web visualisation or CODESYS Target visualisation, irrespective of whether the visualisation originates from a Berghof PLC control unit or some other CODESYS control unit.

The Ethernet Terminal ET2115 can be connected via Ethernet interfaces; the Controller DC2115 can be connected via different interfaces and has additional digital and analogue inputs/outputs.

The device connection area for all external connections is located at the rear of the devices. These devices are intended for installation on a flat surface in a pre-prepared installation cut-out.

All connections are of the insertion type.

3.2. Scope of delivery and accessories

Scope of delivery
DC2115
- Device
- E-I/O connector, 12-pin, black (order no. 15838)
ET2115
- Device
- E-I/O connector, 2-pin, black (order no. 204801800)

Accessories
DC2115
- E-I/O connector, 6-pin, black (order no. 204803900)
- E-I/O connector, 12-pin, black (order no. 15838)
ET2115
- E-I/O connector, 2-pin, black (order no. 204801800)

3.3. Product features

Installation
The device is designed for installation in a front panel or in a control panel in a rough industrial environment.

Processor
In its the basic configuration the device is equipped with an 800 MHz ARM® CPU with a Cortex™-A9 core.

Ethernet
1 Ethernet interface with 10/100 Mbit/s
The Ethernet interface is used for standard Ethernet connections. TCP/IP and UDP/IP protocols permit flexible connections to visualisation software, higher-level control units and to the IT infrastructure.

EtherCAT (DC2115)
The second Ethernet interface is used as an EtherCAT master interface. Other protocols available for the Ethernet interfaces: PROFINET, BACnet and Modbus.

USB
The USB host interface allows a wide range of peripherals to be connected to the device. This allows a USB stick to be used for updating the application or for downloading data directly.

USB sticks with FAT/FAT32 formatting are supported.
If you require support for other USB formats, please contact our Technical Support.
**CAN interface DC2115**
The device has one standard CAN interface which can be used at a speed of up to 1 Mbit/s.

**Serial interface (DC2115)**
The device has 2 serial interfaces (1x RS-485; 1x RS-232).

**Onboard inputs / outputs (DC2115)**
The device incorporates digital inputs / outputs and analogue inputs.

**Real-time clock (DC2115)**
A software interface permits the current time and date to be set and read on a real-time clock with battery back-up.

**microSD card (DC2115)**
The standard commercial microSD card interface (SDHC up to max. 32 GB) allows data to be written to memory cards or read from memory cards.

**Summary of features**

**DC2115**
- ARM® CPU with Cortex™-A9 single-core (800 MHz; optional dual or quad core)
- User program and data memory (RAM): 256 MB onboard
- User program memory (flash): 256 MB onboard
- 2 USB host interfaces (USB 2.0)
- Non-volatile memory 100 kB
- 2 Ethernet 10/100 Base T interfaces (2nd Interface: EtherCAT master interface)
- 1 CAN interface
- 2 serial interfaces (1x RS-485; 1x RS-232)
- 1 µSD card slot
- Onboard I/O
- Real-time clock

**ET2115**
- ARM® CPU with Cortex™-A9 single-core (800 MHz)
- 1 USB host interface (USB 2.0)
- 1 Ethernet 10/100 Base T interface
4. Installation

4.1. Preparation for installation

The device is intended for installation from the front into a rectangular cut-out on a panel. The support material must be rigid and be from 1 to 4 mm thick.

**Fig. 3: Dimensions**

Requirements:

- To allow sufficient air circulation, it must be ensured that the device has a clear space of at least 20 mm all round at the rear.
- The max. ambient temperature inside the control cabinet must not exceed 55 °C in operation.
- The support material for the installation cut-out must be flat, sufficiently stable, and be from 1 to 4 mm thick.

**NOTE**

**Damage to the device!**

Installation on uneven support material can lead to mechanical stresses and cracks in the front face or malfunctioning of the touch screen.

- Make sure that the mounting points of the device are all in a common plane, with no more than maximum ±0.5 mm variation.
Fig. 4: Installation cut-out

- Cut a rectangular installation cut-out in the support material:
  Height: 260 mm
  Width: 402 mm
  Max. Corner radius: 3.0 mm

- Thickness of the support material:
  Optimally: 2.0–3.0 mm
  Max.: 4.0 mm
4.2. Installation

Requirements:

→ The securing clips must not be attached to the device.

1. Making sure the alignment is correct, push the device evenly into the installation cut-out.

NOTE

Damage to the device!
If installation is performed carelessly the device can fall out of the installation cut-out or be damaged.

► Do not tilt the device.
► Restrain the device against falling until the securing clips have been secured.
2. Make sure the device lies flush all round.

Fig. 6: Inserting the securing clips (rear view)

3. Secure the device with 2 securing clips: Insert the securing clips into the cover at diagonally opposite points and tighten the screws finger-tight.

Fig. 7: Tightening the securing clips

4. Insert the remaining 6 securing clips and tighten all 8 screws equally.
5. Connection

**WARNING**

Uncontrolled and unpredictable operational behaviour!

Failure of certain components in electronic control systems may result in uncontrolled and unpredictable operational behaviour.

- All types of failure and the associated protection systems must be taken into account at system level.
- Comply with all automation system manufacturer instructions.

5.1. Power supply

The device is powered by an external 24 V DC power supply. It is not designed to be connected to a DC mains supply.

- Before connecting the device, ensure that the external power supply meets the required specifications (type K to 61131-2).

<table>
<thead>
<tr>

</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

Internal power supply

A power supply for the system electronics for an input voltage of 24 V DC (-15% / +20%) is integrated into the device. The power supply has integrated protection against reverse polarity and surge current protection (1.2 A).

Installation

- All connections and cables must be laid so as to prevent inductive and capacitive interference causing any damage to the device.
- Ensure that the infeed lines provide adequate current and voltage carrying capacity.
5.1.1. Connecting the power supply to the DC2115

**CAUTION**

*Live parts!*

- Before starting any work on the device, switch off all power feeds, including peripherals.

- Connect the power supply to connector X1 according to the following table.

---

**Fig. 8:** Power supply DC2115 connector X1 with power LED

![Block circuit diagram, ET2115](image)

Fig. 11: Block circuit diagram, ET2115
5.2.3. Digital inputs and outputs (DC2115)

The digital outputs are positive switching 24 V outputs with an output current of max. 500 mA. They have a common reference potential (GND) with the supply voltage.

**NOTE**

Damage to the inputs or to the device!

Voltages over ±32 V can damage the inputs or the device.
- No voltage in excess of ±32 V may be present at the inputs.

The digital inputs are type 1 or 3 (IEC 61131-2) positive switching inputs of type 1 or 3 (IEC 61131-2). They are designed for nominal input voltages of 24 V. The input signals are transmitted internally on a cyclical basis for process data processing. An open input is interpreted as static 0. The inputs also have a common reference potential (GND).

The following counterparts have been tested with the S2C-SMT 3.5 (Weidmüller) connector and are approved for use with the device:

> B2CF 3.50/12/180F

5.2.4. Analogue inputs DC2115

Basic considerations for analogue inputs

- An analogue input channel always consists of two connections: AI (U) or AI (U/T) and AGND.
- The AI (U/T) channels can measure either voltages (U) or evaluate PT100(0) sensors.
- The AI (U) channels can measure voltages or be used for compensation of the line resistances for PT100(0) measurements (3-wire measurement).
- The Earth/Ground/GND lead of a voltage sensor or temperature sensor connected to an analogue input may be connected only to AGND (not to GND or PE (equipotential)).
- Different AGNDs (e.g. on one terminal strip) may not be connected together.
- AGNDs may not be connected to the general GND of the control panels or to the "M" on the control unit (GND and AGND are already connected within the control unit, via a special filter).
- AGNDs may not be connected directly to the equipotential bonding conductor (PE) of the machine or system.
- Long cables and wires with a small cross-section lead to voltage drops and deviations in PT100(0) measurements (due to resistance of the lead). These unavoidable deviations must be taken into account when planning the wiring.
- To avoid interference, analogue I/O wires must be kept separate from digital signals and power cables.
- Screened cables are advisable for all analogue I/Os. The screen is maintained from the respective sensor or instrument through into the control panel or close to the control unit.

The following counterparts have been tested with the S2C-SMT 3.5 (Weidmüller) connector and are approved for use with the device:

- Weidmüller B2CF 3,50/06/180(F) SN BK

<table>

<tr>
<td>Clamp arrangement</td>
<td>Shielding on common AGND pins</td>
<td>–</td>
</tr>
<tr>
<td>Sampling duration/rate for measuring values</td>
<td>1 ms</td>
<td>A reading is taken from each input channel every millisecond, regardless of how many channels are actually in operation.</td>
</tr>
<tr>
<td>Sampling rate, operating mode AI-PT</td>
<td>250 ms</td>
<td>In operating mode AI-PT, calculations are carried out after the millisecond sampling rate. A new value is available in the user program every 250 ms.</td>
</tr>
</tbody>
</table>

### Digital filtering

<table>
<thead>
<tr>
<th>Possible filter settings</th>
<th>Time range for averaging</th>
<th>Time range for averaging Operating mode AI-PT</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>1 ms</td>
<td>0.25 s</td>
</tr>
<tr>
<td>10</td>
<td>10 ms</td>
<td>2.5 s</td>
</tr>
<tr>
<td>100</td>
<td>100 ms</td>
<td>25 s</td>
</tr>
<tr>
<td>1,000</td>
<td>1,000 ms (1 s)</td>
<td>250 s</td>
</tr>
</tbody>
</table>

If filtering is active, an average is calculated for the set time range. However a value is still issued during the sampling rate interval. For example, if the filter is set to 1,000, the average of the measurements for the previous 1,000 ms / 1,000 measurements is issued each millisecond (or, in the case of operating mode AI-PT, the average for the last 250 ms / 1,000 measurements).

The filtering can be activated and configured using CODESYS V3. The sampling rate is constant. It can only be filtered with a whole multiple of the sampling rate.
# Operating modes for the analogue inputs

## NOTE

**Damage to channel**

High voltages can damage analogue channels, stopping them from working correctly.

- Ensure the input voltage does not exceed ±30 V.

---

Voltage input AI (U)

- Only use the corresponding AGND for each voltage input.
- Do not connect AGNDs from different channels.
- AGNDs from different channels must always be connected separately to the connector X1.
- Do not connect to the common GND. The required connections can already be found on the circuit board.
- Cables to the analogue sensors/encoders should be connected as directly as possible (avoid the use of terminals and terminal blocks).
Temperature measurement AI (T)

Fig. 18: Example connection: Temperature measurement

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>PT 100 with 2-wire connection</td>
</tr>
<tr>
<td>2</td>
<td>PT 100 with 3-wire connection</td>
</tr>
</tbody>
</table>

- Only use the corresponding AGND for each input.
- Do not connect AGNDs from different channels.
- Do not connect to the common GND. The required connections can already be found on the circuit board.
- Cables to the PT100(o) sensors should be connected as directly as possible (avoid the use of terminals and terminal blocks).
- Only connect PT100(o) sensors to AI (U/T) channels.

### 2-wire measurement
Resistance can result in a measurement error, which in the case of long cables with a small cross-section can be up to 10°. If the temperature of the sensor is known, this deviation can be subtracted by the software automatically and compensated (alternatively, use 3-wire measurement).

### 3-wire measurement
The nearest AI (U) connection is used to compensate the resistance in the cable. It can only be used directly in conjunction with the following AI (U/T) channel. Channels 1 and 2, and also channels 3 and 4 each form a pair for 3-wire measurement.
5.2.5. Ethernet

The on-board Ethernet adapter has one 10/100-Base-T RJ-45 port for connection to the network.

5.2.7. USB

Devices with a USB interface can be connected to the USB host port (Rev. 2.0). Suitable USB device classes are:

- CODESYS user: only USB stick
- Linux level: USB stick or mouse

![USB Interface](image)

**Fig. 21: USB interfaces X3 and X5 (DC2115)**

<table>
<thead>

</tr>
</tbody>
</table>

**NOTE**

Damage to USB stick and malfunction due to data loss!
Removing a USB stick while it is still in use and data are being transferred can render the USB stick unusable. Open files which cannot be accessed due to removal of the USB stick can block the device.

- Therefore ensure that all operations are complete before removing the USB stick.

**NOTE**

Damage to property and malfunctions due to data loss!
The USB interface is protected against overloading (> 0.5 A). In the event of a short circuit during operation, the control unit may trigger a reset of the system. Substantial property damage and damage to the USB device may ensue.

- Before using a USB device, check carefully its power requirements.

**NOTE**

Failures and malfunctions will occur if direct connections are made to signal earth!

- Use only USB devices that have no direct connection between signal earth and the housing.

The USB interface connector is designed to withstand 1,000 insertion and withdrawal cycles.
5.2.8. CAN Bus (DC2115)

Properties of the CAN interface

<table>

<td>NC</td>
<td>8</td>
<td>NC</td>
</tr>
</tbody>
</table>

If the CAN interface is located at the start or end of the CAN bus topology:

- Set switch S2 to ON in order to switch on the 120 Ω terminal resistance between CAN_L and CAN_H.
5.2.9. Serial interfaces (DC2115)

The module has two serial communications interfaces (1x RS-232 and 1x RS-485), which are connected via the common RJ45 connector X6.

Maximum baud rate for both interfaces: 115 kBa

Fig. 23: RS-232 / RS-485 interface X9

<table>
<thead>
<tr>
<th>Pin</th>
<th>Assignment / software interface</th>
<th>Pin</th>
<th>Assignment / software interface</th>
</tr>
</thead>
<tbody>
<tr>

<td>7</td>
<td>(reserved)</td>
</tr>
<tr>
<td>4</td>
<td>RS-485 Tx/Rx+ / COM 2</td>
<td>8</td>
<td>ISO GND</td>
</tr>
</tbody>
</table>

The RS-485 interface is "soft" terminated in the dialogue controller with 560 Ω.

If the interface is located at the start or end of the bus topology:

- Set switch S3 to ON in order to switch on the 120 Ω terminating resistor.

Fig. 24: RS-485 switchable terminating resistor
As far as possible, the assignment of the interfaces should be carried out in accordance with the specifications given in "MODBUS over Serial Line; Specification and Implementation Guide V1.02”.

**Signal interference and terminating resistor**

To minimise interference, the following instructions must be complied with.

***Actively driven bus***
- An appropriate protocol must be employed to ensure that at all times one of the bus participants is actively driving the bus.
- For a highly symmetrical signal-noise ratio the bus must have defined statuses for logical "1" (A–B < –0.2 V) and logical "0" (A–B > +0.2 V).

***Undriven bus***
- The bus termination must be as asymmetric as possible to ensure the greatest possible signal-noise ratio (to reduce the symmetrical signal-noise ratio).
- In order to achieve the necessary voltage difference between the signals, a suitable resistor network must be used as the line termination.
- The necessary size of the resistors is governed by the bus length and transmission rate (similarly to the line termination for Profibus, see DIN EN 61158-2).

***Connections with GND***

To minimise common-mode interference or malfunctions due to potential differences:
- Check the topology and line lengths to determine whether additional connection to GND are necessary.
- For electrically isolated interfaces with connections to the reference ground at one point: link to GND.
- Where necessary, provide an attenuated link to GND (e.g. via 200 Ω) at multiple points.
6. Operation

6.1. Switching on and off

**NOTE**

Damage or malfunction!
- Do not insert, connect, undo or touch any connections whilst the device is in operation.
- Before starting any work on the device, switch off all power feeds, including those to any connected peripherals (sensors and programmable devices etc. with independent power supplies).

**NOTE**

Damage to property!
- Before connecting the power supply, ensure that all cabling and the polarity of all the connections are correct.

Switching on
The device does not have an on/off switch. The device starts automatically when the system is switched on or the power is connected.

Switching off
The device is switched off when the system is switched off or the power supply is disconnected.
6.2. Network start-up

6.2.1. DC2115 Web interface

The device must be connected to the network with the correct settings before it can be used.

1. Supply the device with power (24 V). After the start the current IP address and network mask of the DC2115 are shown at the top right of the display.
2. Connect the device to a programming computer using a network cable (X4) and network switch.
3. Open a web browser on the programming computer.
4. Enter the IP address of the device into the web browser. The login screen will appear.

5. Use the following user name and password to log into the device:
   - Name: admin
   - Password: admin
The web configuration page will be displayed.

Fig. 27: "Network Configuration" page

7. Check the network settings and make any changes in the text boxes if required.
   DC20XX configuration: ETH0 = X4, ETH1 = X5

8. Save the settings by clicking on "Save".

9. Additional settings can also be viewed and/or modified on the web configuration page (for example, "system time", display resolution, TargetVisu).
10. In order to save all of the modified settings, reboot the device:
   - Disconnect the device temporarily from the power supply
   - or -
   - Click on "Reboot" in the web interface and then confirm on the next screen by clicking on "Reboot Module".

The device is now configured and ready for use.

### 6.2.2. DC2115 OnScreen config

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Damage to property!</td>
</tr>
<tr>
<td>- Before connecting the power supply, ensure that all cabling and the polarity of all the connections are correct.</td>
</tr>
</tbody>
</table>

1. Supply the device with power (24 V).
   After the start the current IP address and network mask of the DC215 are shown at the top right of the display.

![Fig. 28: Main screen of the device](image)

2. To change the IP address via the display, press the "Settings" icon (1).
   The page with the network settings of the device appears.

![Fig. 29: Network settings](image)
3. If necessary, press the “Edit” button and change the network settings as required (IP address, network mask, gateway).

4. Press the “Next” button.
   The page with the summary of the network settings appears.
   
   ![Fig. 30: Summary of the network settings](image)

5. To change other settings or to correct the changes, press the “Back” button.

6. If no settings were changed, press “OK”.
   The main screen of the device will appear.
   - or -
   Press the “Save” button.
   The settings will be saved and the device automatically restarts itself.

The device is now configured and ready for use.
6.2.3. ET2115

The device must be connected to the network with the correct settings before it can be used.

**NOTE**

**Damage to property!**

- Before connecting the power supply, ensure that all cabling and the polarity of all the connections are correct.

1. Supply the device with power (24 V).
   After the start the current network settings are displayed (server IP, IP address and network mask).

![Start page, with network settings](image)

**Fig. 31: Start page, with network settings**

2. Press the “Configuration” button.
   A page with further information appears.

![Information page](image)

**Fig. 32: Information page**

3. Press the “Next” button.
The page with the network settings of the device appears.

Fig. 33: Network settings of the device

4. If necessary, press the “Edit” button and change the network settings as required (IP address, network mask, gateway).
5. Press the “Next” button.

The page with the settings for the server IP and Lifeguard appears.

Fig. 34: Setting the server IP

6. If necessary, press the “Edit” button and change the server IP as required.
7. Press the “Expert” button to change the Lifeguard setting.
The page with the Expert settings appears.
– or –
Press the “Next” button and skip to the following page.

![Changing the Lifeguard setting](image)

8. Depending on the controller version, press the “Change” button to change the Lifeguard setting:
   CODESYS V2: “Berghof VNC LG”
   CODESYS V3: “Ping LG”
9. Press the “Next” button to skip the following pages with until the page with the summary of the network settings appears.

![Summary of the network settings](image)

10. If no settings were changed, press “OK”.
    The main screen of the device will appear.
    – or –
    Press the “Save” button.
    The settings will be saved and the device automatically restarts itself.
11. Connect the device to the controller, using the network cable.

The device is now configured and ready for use.
6.3. Operation

6.3.1. Status displays

The status display function is dependent on the software development environment used in conjunction with the device.

The operating status LEDs show the current status of the power supply, the module mode and any error messages.

Location of the operating status LEDs

The Run/Stop and Error LEDs display the system status.

![Location of the operating status LEDs](image)

<table>
<thead>
<tr>
<th>LED</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>PWR (green) Shows that the power supply to the electronics is correct.</td>
</tr>
<tr>
<td>2</td>
<td>Run/Stop (yellow/green/red) Shows the system statuses.</td>
</tr>
<tr>
<td>3</td>
<td>Error (red) Shows the device has been stopped due to an error.</td>
</tr>
</tbody>
</table>

Meaning of the LED displays

- System statuses are shown using flashing signals on the Run/Stop LED in yellow.
- While the Run/Stop light is flashing yellow: The device is in use and must not be switched off.
- The device does not show warnings via the LEDs during start-up.
6.3.2. Function key S1

Fig. 38: Function key (S1)

<table>
<thead>
<tr>
<th>Operating status</th>
<th>Action</th>

<td>Change between PLC run and stop mode.</td>
</tr>
<tr>
<td></td>
<td>Press and hold</td>
<td>Stop the PLC with resetting of variables (cold reset)</td>
</tr>
</tbody>
</table>

6.3.3. Real-time clock with buffer battery DC2115

Setting the date and time
The time can be set via the web configuration page or via the CODESYS V3 library.

Changing the battery
The battery is not designed to be changed by the user; the manufacturer should be contacted in order to change the battery.
6.3.4. microSD card

WARNING

Serious injury as a result of uncontrolled and unpredictable operational behaviour!
Inserting or removing the microSD card can result in the device malfunctioning. Failure in electronic control systems may result in uncontrolled and unpredictable operational behaviour.

- Insert or remove a microSD card only when the device is switched off.

NOTE

Loss of data!
microSD cards do not have their own write protection system.

- Ensure that no data is deleted or overwritten by accident.

Inserting a microSD card

1. Switch the device off.
2. Insert the microSD card into the microSD card slot.
3. Switch the device on again.

The microSD card is now ready for data transfer (read, write and copy).
Path: /media/sd

Max. possible storage capacity: 32 GB.

The life cycle of the gold-plated contacts is up to 10,000 insertion and withdrawal cycles.
The microSD card drive has a push-in/push-out insertion and ejection mechanism.
To avoid malfunctions, do not withdraw the microSD card by pulling it.
6.4. Troubleshooting

6.4.1. No network connection

- Check the cabling / switch.
- Check whether an IP address has been duplicated.
- Check the network settings on the PC: The subnet and the subnet mask settings must be the same as those for the controller.
- Check the firewall / anti-virus programs on the PC.
- Check the Lifeguard settings.

6.4.2. In error stop mode DC2115

1. Log in to the device via a web browser.
2. Determine the cause of the fault (Diagnostics > PLC Log/System Log).
3. Correct the fault.
4. Restart the device (press “Reset” on the device).

The device is now ready for use.
7. Maintenance/upkeep

Repairs and corrective maintenance may only be carried out by the manufacturer or authorised customer service centres.

7.1. Maintenance

**WARNING**

Uncontrolled and unpredictable operational behaviour!

Failures or malfunctions may result in uncontrolled and unpredictable operational behaviour.

- Do not insert, connect, undo or touch any connections whilst the device is in operation.
- Before starting any work on the device, switch off all power feeds, including those to any connected peripherals (sensors and programmable devices etc. with independent power supplies).

If the device is used correctly it should not require maintenance.

- Make sure all the ventilation holes are kept free of obstructions.
- Do not open the device. If work is required on the device necessary contact customer service.
7.2. Cleaning

NOTE

Damage to the front panel!

The front panel must not be exposed to any mechanical or chemical stress.

- Do not use any high-pressure cleaners or steam jets.
- Do not use any corrosive cleaning products, any thinners, any abrasive media or any hard objects.
- Do not apply any undue force to the front face.

- To avoid faults due to inadvertent activation, switch the device off before cleaning the front panel.
- Clean the surfaces using only a dry, lint-free cloth.

7.3. Chemical resistance

7.3.1. Resistance of the touch screen

The active area of the touch screen is resistant to the following chemicals when exposed to them for a period of up to an hour at a temperature of max. 21°C:

Domestic and industrial chemicals
- Detergent
- All-purpose cleaners
- Washing-up liquid
- Glass cleaner
- Hydrogen peroxide (3 %)
- Lysol
- Ethanol
- Isopropanol
- Acetone
- Methyl ethyl ketone
- Toluene
- Concentrated hydrochloric acid
- Petroleum
- White spirit
- Petrol
- Engine oil
- Diesel
- Gear oil
- Brake fluid
- Anti-freeze
- Hydraulic oil

Condiments
- Lemon juice
7.3.2. Resistance of the front diaphragm

NOTE
Damage to the front diaphragm!
The front diaphragm is not resistant to the following chemicals and influences, and can be damaged by their effects:
- Benzyl alcohol
- Concentrated alkalis
- Concentrated inorganic acids
- Dichloromethane (methylene chloride)
- High-pressure steam above 100 °C
- Long-term effects of direct sunlight
  - Keep these substances away from the front diaphragm.
  - Protect the display against direct sunlight.

The front diaphragm (Autoflex EB) is based on a polyester film with biaxial alignment. It is highly resistant to solvents.
In accordance with the standard DIN 42 115 part 2, the front diaphragm is resistant to the following chemicals, without any evident change or damage:

Application for more than 24 hours
- 1,1,1 trichloro ethane
- Aliphatic hydrocarbons
- Benzene
- Cyclohexanol
- Diethyl ether
- Ethanol
- Acetaldehyde
- Acetone
- Acetic acid < 50 %
- Sulphuric acid 30 %
- Diacetone alcohol
- 1,4 dioxane
- DS2 decontamination fluid
- Fabric conditioner
- Acetonitrile
- Alkali carbonate
- Ammonia < 32 %
- Sal ammoniac < 10 %
- Bichromate
- Caustic potash (potassium hydroxide) < 2 %
- Sodium hydroxide 50 %
→ Refrigerant (Hysol X)
→ Diesel oil
→ Castor oil
→ Silver nitrate 20 %

→ Ethyl acetate
→ Acetaldehyde
→ Fluorochlorinated hydrocarbons
→ Glycerine
→ Isopropanol
→ Methanol

→ Ferric chloride < 30 %
→ Formic acid (methane acid) < 50 %
→ Hydrochloric acid < 10 %
→ Hydrogen peroxide < 25 %
→ Isophorone
→ Methyl ethyl ketone (butanone)
→ Nitric acid < 10 %
→ Tetrahydrofuran
→ Formaldehyde (37 %) in water

→ Linseed oil
→ Paraffin oil
→ Petrol
→ Silicone oil
→ Turpentine substitute
→ Universal brake fluid (e.g. Castrol Girling)
→ Dibasic ester 6
→ Skydrol 500B4
→ Lixtop
→ Potassium ferrocyanide

→ Tetrachloro ethylene (perchloro ethylene)
→ Toluene
→ Triacetin
→ Trichloro ethylene
→ Xylene

→ Phosphoric acid < 30 %
→ Potash
→ Sodium hypochlorite < 20 %
→ Sulphuric acid < 10 %
→ Detergent
→ Saturated seawater solution
Application of 24 hours at 50 °C

- Top Job
- Jet Dry
- Gumption
- Fantastic
- Formula 409
- Grape juice
- Milk
- Ariel
- Persil
- Wisk
- Lenor
- Downey
- Ajax
- Vim
- Domestos
- Vortex
- Windex

Application of less than 1 hour

- Glacial acetic acid (pure acetic acid)
8. Uninstallation

8.1. Uninstallation

1. Disconnect the device and its peripherals from the power supply.
2. Unplug all connector connectors and cables.

![NOTE]

**Damage to the device!**

If uninstallation is performed carelessly the device can fall out of the installation cut-out or be damaged.

- Do not tilt the device.
- Secure the device against falling, especially when taking it out of the installation cut-out.

Fig. 39: Undoing the screws

3. Undo equally the screws of the 8 securing clips.
4. Remove the 8 securing clips.

5. Push the device evenly forwards out of the installation cut-out.
9. Disposal

The device contains the following components which need to be disposed of separately:

- Metals
- Electronic components
- Battery

The following options are available for disposal of the device:

**Disposal by the manufacturer**
- At the end of the device’s life cycle you can return it to the manufacturer for a set fee. The manufacturer will then deal with the recycling of the device.

**Disposal in accordance with regional regulations**
- Dismantle the device and disassemble it completely into its component parts.
- Send the metal parts for metal recycling.
- Sort the electronic parts (circuit boards, drives etc.).
- Dispose of the electronic scrap in accordance with the national laws and regulations.
- Check that the battery is fully discharged.
- Dispose of the battery in accordance with the national laws and regulations, via an authorised collection point.

The 'Version' field (delivered version) specifies the ex works condition of the module.
10.4. Identification

The characteristics of the device can be decoded from the identification key.

Fig. 43: Identification key ET2115 and DC2115
11. Standards and certificates

11.1. Standards

Applicable directives
- EMC directive 2014/30/EU

Applicable standards
- PLC standard EN 61131-2:2008-4
- Safety provisions DIN EN 61010-2-201
- Emitted interference, residential areas DIN EN 61000-6-3
11.2. UL certificate

CERTIFICATE OF COMPLIANCE

Certificate Number 2015-12-23-E242595
Report Reference E242595-D1001-1/AD/ID-UL
Issue Date 2015-12-23
Issued to: BERGHOFF AUTOMATION GMBH
Applicant Company: Harrestrasse 1
ENNINGEN, BADEN-WUERTTEMBERG 72800 GERMANY
Listed Company: Same as Applicant

This is to certify that representative samples of Programmable controller
ET2115W X TS 0.6S followed by 3 letter code

Have been investigated by UL in accordance with the Standard(s) indicated on this Certificate.

CAN/CSA-C22.2 No. 61010-1, 3rd Edition, Revision date July 1, 2015

Additional Information: See the UL Online Certifications Directory at

Only those products bearing the UL Certification Mark should be considered as being covered by UL’s Certification and Follow-Up Service.

Look for the UL Certification Mark on the product.

This is to certify that representative samples of the product as specified on this certificate were tested according to the current UL requirements.

Fig. 44: UL certificate
The devices are authorised to use the following mark:

![cULus mark](image)

Fig. 45: cULus authorisation

The devices have been awarded cULus authorisation according to standard UL 61010-2-201 NRAQ /7.

Produktbezeichnung / product name
ET2115 W X TS 0.8 XXX

Produktnummer / product number
2220020000 222002100 222002400 222002600

Es wird die Übereinstimmung mit folgenden EG-Richtlinien und Normen erklärt:
The requirements of the following EC directives and standards are met:

Angewandte Richtlinien / applied directives
EMV Richtlinie 2014/30/EU

Angewandte Normen / applied standards
Produkt-Norm DIN EN51131-2:2008-04
Grundnorm Sträusendung Wohnbereich DIN EN61000-6-3:2012-11

Datum
28.01.2016

Stefan Sternitzki
Geschäftsführer Berghof Automation GmbH
Chief Executive Officer Berghof Automation GmbH

Uwe Mönchow
Projektleiter
Project Manager
11.3.2. DC2115

EG-Konformitätserklärung
Declaration of conformity

We hereby declare, that the following described modules in their conception, construction and form are in compliance with the listed directives and standards. In case of any alteration of the modules, not certified by us, this declaration is void.

Hersteller / manufacturer
Berghof Automation GmbH
Harretstrasse 1
D-72800 Eningen

Produktbezeichnung / product name
DC2115 W X TS 0.5 XXX

Produktnummer / product number
270010900

Es wird die Übereinstimmung mit folgenden EG-Richtlinien und Normen erklärt:

11.4. Information on copyright and software licence

The firmware of the devices contains der free software. Parts of this software are available under the following OpenSource licences, amongst others:

- GNU General Public License (GPL)
- GNU Lesser General Public License (LGPL)
- Mozilla Public License (MPL)
- FreeType License (FTL)

The source code of the free software may be requested from Berghof Customer Service within three years pf delivery of the device, at cost price.
12. Customer services / addresses

Repairs and corrective maintenance may only be carried out by the manufacturer or authorised customer service centres.

12.1. Customer services

Berghof Automation GmbH
Harretstr. 1
72800 Eningen
Germany
